

Password Strength Report

Score: 7/14 checks passed
Our evaluation: Weak!

Check Results

 **FAIL** **Length**
Password length is 6 characters, which is below the minimum required length of 8.

 **FAIL** **Uppercase**
Password does not contain any uppercase letters.

 **PASS** **Lowercase**
Password contains at least one lowercase letter.

 **FAIL** **Digits**
Password does not contain any digits.

 **PASS** **Special chars**
Password contains at least one special character.

 **PASS** **Weak substitutions**
Password does not contain any common substitution patterns.

 **PASS** **Repeated chars**
Password does not contain any repeated character sequences.

 **PASS** **Sequential pattern**
Password does not contain any sequential patterns.

 **PASS** **Date pattern**
Password does not contain any date or year patterns.

 **PASS****Entropy**

Password entropy is 35.15 bits (Weak).

 **FAIL****Crack time (online)**

Estimated crack time under an online attack (1,000 guesses/second, rate-limited): 220 days.

 **FAIL****Crack time (offline slow hash)**

Estimated crack time against a slow hash (bcrypt/Argon2 at 10,000,000 guesses/second): 31 minutes.

 **FAIL****Crack time (offline fast hash)**

Estimated crack time against a fast hash (MD5/SHA-1 on NVIDIA RTX 3090 at 22,000,000,000 guesses/second): less than a second.

 **FAIL****HIBP**

Password has been found in 278 known data breach records.

Recommendations

1. This password has been exposed in a known data breach. Choose a completely different password immediately.
2. Use a password with at least 12 characters.
3. Include at least one uppercase letter (A-Z).
4. Include at least one digit (0-9).
5. Password is vulnerable to brute-force attacks under realistic conditions. Increase length and use a wider mix of character classes to significantly raise the estimated crack time.
